

ABSTRACT OF THE DISCLOSURE

The present invention relates to a modular cabinet for use with a gaming device. The gaming device modular cabinet includes a display cabinet removably connected to a component cabinet by a locking mechanism. The cabinets are preferably made of rolled steel, where the display cabinet is adapted to receive at least the display, while the component cabinet is adapted to receive the components for the gaming device other than the display. In a preferred embodiment, the present invention includes laminated side panels connected to the display and component cabinets. The gaming device further includes a monitor cover removably connected to the display cabinet.
